

Ohio

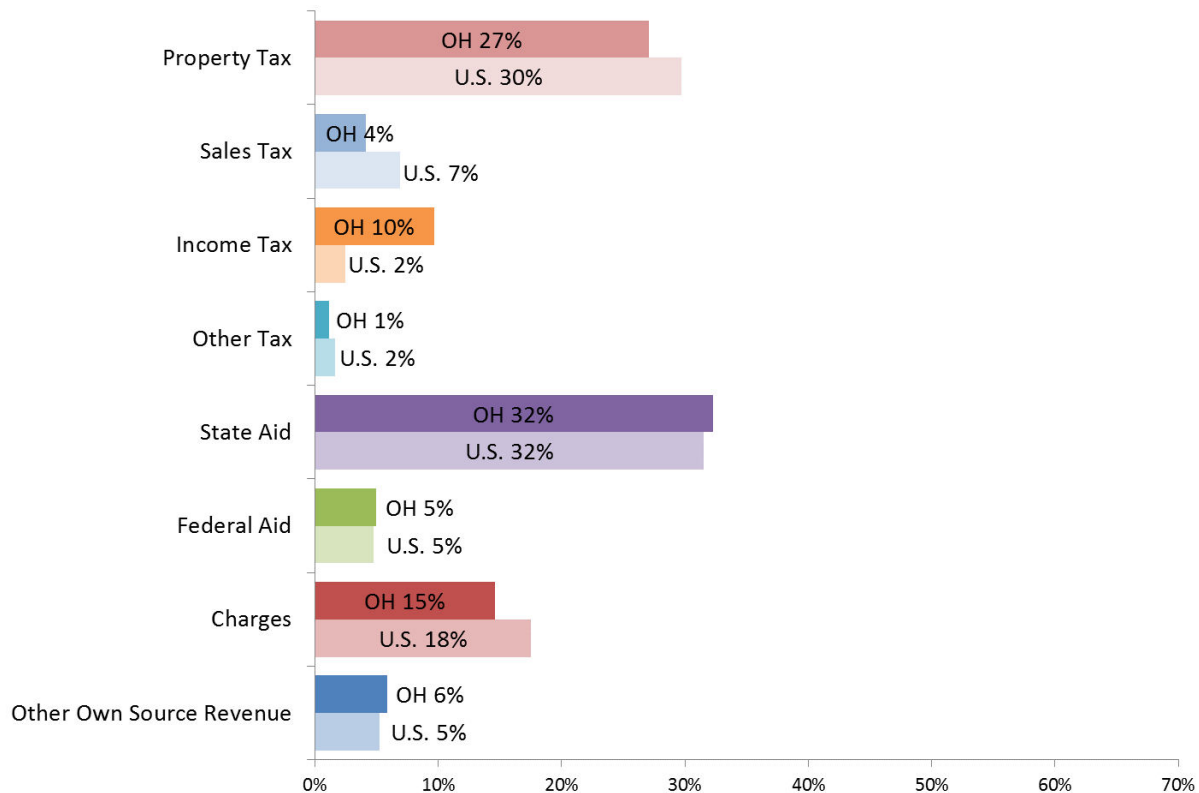

Highlights

Historically, local governments in Ohio relied almost exclusively on property tax revenue to fund operations. When Ohio implemented a state income tax in 1971, the state reduced all non-business property tax bills by a 10 percent “rollback.” In 1979, the state instituted an additional 2.5 percent rollback for owner-occupied residential property (Scott 2013). The state reimburses local jurisdictions for the lost revenue from the rollbacks, which totaled \$1.7 billion in 2012 (Gearhardt 2013).

The largest sources of local government revenue in 2013 were state aid and property taxes. Jurisdictions also collect local income and sales taxes, but local property tax revenue was larger than both of those categories combined (figure OH-1). Counties and regional transit authorities can levy sales taxes, while municipalities and school districts can levy income taxes.

Ohio eliminated taxation of tangible personal property in 2005, phasing it out over five years (Ohio Department of Taxation 2016b).

Property Tax Reliance

In 2013, Ohio's property tax provided only 15 percent of state and local revenue; and property tax burden as a fraction of income was about the U.S. average, although the effective tax rate for the median owner-occupied home is much higher than the U.S. average (table OH-1).

Table OH-1
Selected Ohio Property Tax Statistics, 2013¹

	Ohio	U.S. Average	Rank (of 51) <i>1 is highest</i>
Per capita property tax	\$1,215	\$1,441	30
Property tax percentage of personal income	3.0%	3.2%	24
Total property tax as percentage of state-local revenue	14.7%	16.9%	30
Median owner-occupied home value ²	\$130,800	\$176,700	39
Median real estate taxes paid for owner-occupied home ²	\$1,982	\$2,107	21
Effective tax rate, median owner-occupied home ³	1.5%	1.2%	11

Sources: U.S. Census via Significant Features of the Property Tax, American Community Survey

¹ All revenue numbers in this table include the state government as well as local governments.

² The statistics for median owner-occupied home value and median real estate taxes paid for owner-occupied home are five-year average statistics for years 2009–2013.

³ Calculated as the median real estate tax paid on owner-occupied homes as a percent of the median owner-occupied home value.

Administration and Assessment

Ohio's 4,000-plus local jurisdictions levying property taxes include counties, townships, municipal corporations, school districts, joint vocational school districts, and special service districts. Visual reassessments are conducted by the county every six years, and property values are updated for inflation every three years (table OH-2). Triennial updates are separately calculated for Ohio's two real property classifications: Class I, residential and agricultural properties; and Class II, commercial and industrial properties.

Most real property is assessed at 35 percent of market value. If it meets certain requirements, commercial agricultural property may be assessed according to current-use values, classified by soil type. Forest land is assessed at 35 percent of market value, but commercial forest land of 10 or more acres may be assessed at current use.

Ohio repealed its tangible personal property tax in 2005 and phased it out over five years, beginning with an exemption for new manufacturing equipment and ending with a phaseout of the personal property tax applied to telecommunications property. Local governments were reimbursed for much of the revenue loss by direct state payments (Errecart, Gerrish, and Drenkard 2012).

Limits on Property Taxation

Local governments in Ohio may only institute property tax rates of up to one percent, or 10 mills, on real property without approval from a majority of voters. The overlapping political jurisdictions associated with each property share the 10 mills of revenue, with the allocation among them set by law. School districts usually receive between four and six mills (Sullivan and Sobul 2010). Taxes levied within the 10-mill limitation are referred to as inside mills, and those voted in excess of the 10-mill limitation are called outside mills.

Because of House Bill 920 (1976), Ohio county assessors recalculate tax rates after reappraisal and triennial updates to keep the majority of nominal property tax revenue constant over time. For the voted millage in excess of 10 mills, “tax reduction factors” decrease tax rates in proportion to inflation-based increases in property value. Similarly, the county increases tax rates in years when property value decreases, holding tax revenue near the level that was collected in the first year of the levy. To collect additional revenue, a district must propose and pass another tax initiative. As a result, balloted tax initiatives are common in Ohio. There were 347 levies placed on the ballot in 2013, and 207 of those initiatives were approved by voters (Ohio School Boards Association 2014).

School districts are the only jurisdiction that can collect inflation-based tax revenue, but only if their total current expense millage is less than or equal to 20 mills. House Bill 920 established a tax rate floor for school districts that prevents tax reduction factors from reducing the effective tax rate below 20 mills. Once a county has reduced a district’s effective tax rate to 20 mills, the rate is frozen and the district can collect all of the tax revenue associated with further increases in property value.

Property Tax Relief and Incentives

The 10 percent and 2.5 percent rollbacks mentioned previously reduce individual homeowner’s property tax bills and should be considered a type of property tax credit.

In addition, Ohio exempts \$25,000 of property value for senior citizens and the disabled through a homestead exemption. Beginning in 2014, House Bill 59 established an income eligibility requirement of \$30,000 for homeowners 65 and over. All previous recipients of the homestead exemption will continue to qualify for the program (Gearhardt 2013).

There are two major property tax incentives for economic development in Ohio. The first is the tax increment financing program, focused on distressed or underdeveloped communities. Ohio also operates the enterprise zone program, which may award local property tax exemptions to eligible businesses that locate in designated areas. Tax incentives also exist for property improvements that increase reliance on sustainable energy sources or improve environmental or economic conditions in certain locations.

Table OH-2
Ohio Property Tax Features, 2013

Feature	Ohio	Count for 50 states plus DC
Statewide Classification of Real Property	No	25
Assessment of property primarily by county	Yes	30
Limits on property tax rates or levies	Yes	45
Limits on the rate of growth of assessed value	No	19
Circuit breaker property tax relief program	No	34

Key Property Tax History

Ohio's public school funding system has been deemed unconstitutional four times since 1991 by the state supreme court. Although the supreme court ordered the state to improve the system of school funding, no significant changes were made and the litigation ended with the supreme court assigning the task to the state legislature in 2003 (Pittner et al. 2010).

Passed in 2009, House Bill 1 altered the school funding formula with regard to local property tax revenue. Before 2009, state aid was reduced when property values increased due to inflation, even though a school district may not collect any additional local revenue due to tax revenue limits. House Bill 1 requires state aid to be calculated based on tax revenue instead of property value. Because districts at the 20 mill floor collect additional tax revenue when property values increase, state aid can still be reduced when property values increase in districts at the 20 mill floor, but not for other districts (Sullivan and Sobul 2010).

Recent Developments

House Bill 59 was passed in July 2013, phasing out the 10 percent and 2.5 percent state-funded rollbacks that began in the 1970s. These rollbacks will not apply to tax levies that are passed after August 31, 2013 (Gearhardt 2013). Elimination of the rollbacks increases local taxpayers' share of property taxes, which may reduce voter support for future tax levies.
